Fast flying Drone snags in netting

DEFENCE TEST summary by former serving officer:

"The attack profile was good - exactly the style we are using for the drones

I think this actually may stop Lancet loitering munitions.

This system will save lives and prolong equipment survivability, because, firstly it's giving cover to the guys on the ground and secondly, the CNDS is deflecting the blast especially for shape charge munitions

Countering the threat before it gets close"

This protect and deflect system can be used over trenches, or put over a frame to form a hide for personnel, or a garage for armoured vehicles.
