Virus & Bacteria Testing Results

Bacteria

Tested to accordance with **BS EN 1040:2005** & **BS EN 1276:2009**. Demonstrated at least a 5 log₁₀ reduction in viable bacterial counts. The test was performed using Pseudomonas aeruginosa, Escherichia coli, Staphylococcus aureus and Enterococcus hirae as standard organisms and viruses.

Viruses

For viruses the test product received has shown a reduction of 4.46. log₁₀

Contact times - 30 seconds ± 5s

The members of the family Coronaviridea are enveloped and have a positive sense RNA genome. Coronaviruses have a distinct morphology with an outer 'corona' of embedded envelope spikes. These viruses cause a broad spectrum of animal and human disease.

Our Extra Strength, "Dr. Brown's" Hand Sanitiser kills up to 99.99% * of Viruses & Bacteria, including COVID-19. It is over 80% denatured alcohol.

With its thick, highly concentrated formula, you can use less per squeeze; so a little goes a lot further.

Our easy to use flip caps help control the right amount is dispensed.

Though we are manufacturing here in Wales, due to high demand we may find ourselves with low stock availability so please be flexible in the sizes you order.
